

A few questions about your Oriel billing software

Please pass Part 1 to the Oriel people. Parts 2 and 3 are for you.

Nothing here changes anything in Oriel. We are not installing anything, not editing anything, and not touching your bills. Everything below is either a question to ask, or something to *look at* and send us a picture of.

Why we are asking

We are building the part of the app where staff record what they have sold. Oriel already knows every product and every bill. The one thing it does not know is **which staff member made each sale**. If we can read what Oriel already has, two good things happen:

1. Staff never type a product name or price. They point the phone at the barcode and the item is recognised on its own.
2. The app checks every sale a staff member claims against the real bill, by itself, every night. You would only be shown the few that do not match, instead of having to check anything yourself.

Part 1 | Questions for the Oriel people

Forward this page as it is, or read it out on a call. Please ask them to answer **by number**, so nothing gets missed.

1. Does Oriel have a way to record **which staff member made a sale** - a "salesman", "sales executive" or "staff" box on the bill screen? If yes, can we get a report of sales grouped by that person?

2. Can Oriel export the full item list - barcode, item name, price, and which category or counter it belongs to - as an Excel or CSV file?

3. Can Oriel export bills **with the individual items shown on each bill**, not just the bill total? We need the barcode, quantity and amount for every line.

4. Can Oriel save either of those exports into a folder on the computer **automatically** - say every evening - without somebody clicking it each time?

5. Which database does Oriel use to store its data, and where on the computer is that data file kept?

6. Would you allow a small program of ours to **read** that database, without writing anything to it? We want to be sure this does not affect your support or warranty. If a password is needed, please tell us how to get a read-only one.

7. Both our shops run Oriel. Do they share one common database, or does each shop keep its own separate one?

8. If a bill is cancelled, or a customer returns an item the next day, does that show up in the exports - and how would we tell a return apart from a normal sale?

Question 1 matters most. If Oriel can already record who made the sale, a large part of what we are building may not be needed at all - and we would rather find that out now than later.

Part 2 | Two questions only you can answer

A. When you print barcode stickers, does every single piece get its own different number, or do all pieces of the same design and size share one number?

For example: if you have ten identical blue shirts in size 40, do all ten stickers read the same, or does each shirt have its own number?

This one matters a great deal. If every piece has its own number, the app can tell on its own when something has been counted twice, with no guesswork at all.

B. At the counters, does each staff member handle their own products only - one person on sarees, another on kurtas - or does anyone sell anything?

Part 3 | A few minutes on the shop computer

About ten minutes. **Please do not change or delete anything** - we only need to look.

3.1 Find where Oriel is installed

1. Press the **Windows key** on the keyboard - the one with four squares, near the space bar.
2. Type **Oriel**.
3. Oriel appears in the list. **Right-click** on it.
4. Choose **Open file location**.
5. A folder opens. If you see an arrow-shaped shortcut icon rather than a list of files, right-click it and choose **Open file location** once more.
6. *If you can:* click **View** at the top and choose **Details**. That adds a column showing what type each file is. If you cannot find it, never mind.
7. **Send us a picture of that window.**

How to send a picture. The easiest way is to take a photo of the screen with your phone and send it on WhatsApp. That works perfectly well. If you would rather do it on the computer, hold **Windows key + Shift + S**, drag a box around the window, and it is copied ready to paste into an email.

There will be many files with odd names. You do not need to understand any of them - one of them tells us what we need, and we will pick it out.

3.2 Export the item list

1. Open Oriel as normal.

2. Look for a menu called **Reports, Masters, Item Master** or **Stock** - the wording differs between versions.
3. Find the list of all items, with their barcodes and prices.
4. Look for a button marked **Export, Excel**, or a small green Excel icon, and save the file to the **Desktop**.
5. **Send us that file.**

If you cannot find it, that is exactly what question 2 is for - just ask them and skip this step.

3.3 Export one day's bills

1. In the same **Reports** menu, look for **Sales Register, Bill Register, Item-wise Sales** or **Day Book**.
2. Choose **any one ordinary day** of trading - yesterday is fine.
3. **Important:** if it offers a choice between a summary and a detailed or item-wise report, choose the **detailed / item-wise** one. We need the individual items on each bill, not just the totals.
4. Export it to Excel and save it to the **Desktop**.
5. **Send us that file.**

There is no need to hide or remove anything from these files. They stay between us and are only used to work out the format.

What to send back

Anything you can get is useful, even if it is not all of it.

- [] The Oriel people's answers to the eight questions in Part 1
- [] Your answers to the two questions in Part 2
- [] A picture of the Oriel folder (step 3.1)
- [] The item list file (step 3.2)
- [] One day's detailed bill file (step 3.3)

If you only manage one thing, make it question 1 - whether Oriel can already record who made the sale. That single answer decides how much of the rest we need to build.

Any trouble at any step, stop and send a photo of what you are seeing. It is quicker for us to look than for you to work it out.
